石門水庫為 1960 年代國內最重要的水利建設，自 1964 年竣工營運迄今 60 年，為確保水庫正常營運，歷經多次改造與增建，除排砂隧道外，2023 年完工的阿姆坪防淤隧道可加速改善淤積，另以中庄調整池作為颱風高濁度期間的備援設施，使供水更穩定。

為提升國人對石門水庫的了解，進而珍惜與愛護水資源，本公司特於水利節發行紀念郵票 1 套 2 枚。郵票圖案簡介如下：

- 一、面值 8 元郵票為石門水庫鳥瞰圖，水庫除供應桃園市、部分新北市及新竹縣市用水外，並具防洪、發電、觀光、灌溉等多項功能。
- 二、面值 35 元郵票上方白色水流為溢洪道洩洪，溢洪道為水庫最主要排洪放水設施，可確保颱風期間大壩安全，下方為排砂隧道排砂，可排除庫區底層泥流，以減緩淤積，延長水庫壽命。

The Shihmen Reservoir was the most important hydraulic engineering work of the 1960s. It began operating sixty years ago, in 1964. To ensure proper functioning it has been adjusted and expanded many times. In addition to the Sluicing Tunnel, the Amuping Desilting Tunnel, completed in 2023, can rapidly remove silt, whilst the Zhongzhuang Auxiliary Lake serves as an excess reservoir in times of typhoon floods, stabilizing the water supply.

To increase citizens' understanding of Shihmen Reservoir and their appreciation of water resources and the need to protect them, Chunghwa Post has issued a set of two commemorative stamps in conjunction with the Water Resources Festival. A description of the stamps follows:

1. NT\$8 stamp: A bird's eye view of Shihmen Reservoir: The Reservoir supplies water to Taoyuan City and parts of New Taipei City and parts of Hsinchu County and City. It also has other uses: preventing flooding, power generation and serving tourism and irrigation.
2. NT\$35 stamp: The white water from the surface is the discharge. The Spillway is the main means of discharging flood water. This guarantees the safety of the dam during typhoons, whilst from the bottom the Sluicing Tunnel ensures the discharge of silt thus reducing accumulation of silt and extending the life of the reservoir.

By-issues:

- (1) First Day Cover (195 mm × 120 mm): NT\$3 apiece
- (2) Folder (with or without mount): NT\$8 apiece
- (3) Loose-leaf album page: NT\$8 apiece
- (4) Pre-cancelled FDC affixed with one NT\$8-denominated stamp: NT\$11 apiece
- (5) Pre-cancelled FDC affixed with a full set of stamps: NT\$46 apiece
